on Monday Sep. 24th a technical training on the automatic couplers for Metrorrey was held in Remscheid with the following participants:

Mr. Ernesto Chávez Féison – Bombardier Transportation

Mr. Nils Möhle- Faiveley Transport

Due to the fact that no automatic coupler for the a.m. Project was available neither on stock nor in production or assembly, the training had to be limited to presentation of similar assembly groups during workshop tour and theoretical training based on documentation and drawings.

Faiveley Transport declared that the information about lack of hardware was given in advance and it was proposed by Faiveley Transport before the training to suspend the training.

Training programme:

- Presentation of the company
- Presentation of the Faiveley Transport Site in Remscheid
- Introduction of the coupler
- Explanation of functions and assembly groups
- Maintenance schedules and tasks
- Overhaul schedules and tasks
- Repair precautions and possibilities

During the discussion of the manuals it was decided to revise the manual for correction of minor mistakes as well as for more detailed clarification of several other items. The revision of manuals will be finalised by Faiveley Transport until end of week 41. The original Word document will be supplied to Bombardier Transportation for translation purposes.
